PROFESSIONAL SUMMARY

Motivated and versatile Computer Science undergraduate with hands-on experience in software development, cloud technologies, artificial intelligence integration, and system design. Skilled in developing web and mobile applications, building RESTful APIs, working with databases, and deploying solutions using modern cloud platforms including AWS, Azure, Firebase, and Oracle Cloud Infrastructure. Experienced in integrating AI technologies such as Claude, OpenAI, and Google Gemini into real-world applications. Strong foundation in problem-solving, software engineering principles, DevOps practices, and collaborative development. Continuously expanding technical expertise through industry certifications, personal projects, competitive programming, and hands-on learning, with a passion for delivering innovative and scalable technology solutions.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Dart, Java, PHP, C, C#

Frontend & Mobile: React, Next.js, Vue.js, Flutter (Riverpod), Tailwind CSS, HTML5/CSS3, Bootstrap

Backend & API Development: Node.js, Express.js, NestJS, Flask, REST API Design, Microservices, Authentication & Authorization (Auth0, JWT)

Cloud & DevOps: AWS (DynamoDB), Microsoft Azure, Google Cloud Platform (GCP), Oracle Cloud Infrastructure (OCI), Firebase (Firestore, Auth, Cloud Functions), Docker, Kubernetes, CI/CD (GitHub Actions)

AI / LLM Integration: Claude AI, OpenAI API (GPT-4o-mini), Google Gemini API, Prompt Engineering, Machine Learning, TensorFlow Lite, Scikit-learn, NLTK

Databases: MongoDB, MySQL, PostgreSQL, Firebase Firestore, AWS DynamoDB, Database Design

Engineering Practices & Tools: Git, GitHub, API Testing (Postman), Figma, Linux

PROJECTS

SpendWise — AI-Powered Personal Finance Platform 2026

Team Lead, Team of 5 — University of Ruhuna Final Year Project | Flutter · Node.js/Express · React · Firebase · TensorFlow Lite · Claude AI

- Led a team of 5 to design and ship a three-part full-stack platform — a Flutter mobile app, a Node.js/Express REST API, and a React admin dashboard — covering the complete user journey from expense entry to admin oversight.
- Engineered an AI financial assistant on Claude AI through iterative prompt engineering, converting raw transaction data into natural-language spending summaries, personalized budget recommendations, and conversational Q&A.
- Automated expense capture using receipt scanning and SMS-based transaction detection, feeding a TensorFlow Lite model to power predictive spending analytics.
- Integrated Firebase Authentication, Firestore, Cloud Messaging, and SendGrid to unify auth, real-time data sync, and notification/email delivery across mobile, web, and admin surfaces.
- Built a role-based admin dashboard for user management, complaint resolution, and targeted communications, giving the team a production-style back office alongside the consumer-facing app.

MindCare AI — Privacy-First Mental Wellness Platform 2026

React · Tailwind CSS · Firebase (Firestore, Anonymous Auth, Cloud Functions) · OpenAI API

- Built an anonymous, AI-powered emotional support platform using the OpenAI API to generate context-aware, supportive responses, architected with zero PII collection by design.
- Designed a three-tier (low/medium/high) risk-detection engine that flags concerning language in real time and triggers crisis-aware response guidance.
- Architected a serverless backend on Firebase Cloud Functions with anonymous authentication, keeping the data model privacy-first from the ground up.

SummarAIze — AI Note Summarizer 2025

Next.js 14 · Express/TypeScript · Auth0 · AWS DynamoDB · Google Gemini · OpenAI GPT-4o-mini

- Built a full-stack summarization tool integrating Google Gemini and OpenAI GPT-4o-mini, letting users compare model outputs side by side.

- Secured the application with Auth0 authentication and JWT verification (JOSE), persisting per-user summary history in AWS DynamoDB.
- Shipped PDF and TXT export functionality so users could take generated summaries outside the app.

GitHub: <https://github.com/Jayo013/SummarAIze>

Sentiment Analysis on Customer Reviews 2025

Python · Scikit-learn · NLTK · Flask · Jupyter Notebook

- Trained a logistic regression model to classify customer reviews as positive or negative, using NLTK for text preprocessing and feature extraction.
- Deployed the model as a Flask web application on Azure Web Services, exposing a live REST endpoint for real-time sentiment prediction.

GitHub: https://github.com/Jayo013/sentiment_analysis_project

Personal Portfolio 2025

React · TypeScript · Next.js

- Designed and built a component-based, responsive portfolio site showcasing projects, skills, and experience.

CERTIFICATIONS

Cloud & Infrastructure

- Oracle Cloud Infrastructure 2025 Certified Multicloud Architect Professional
- Oracle Cloud Infrastructure 2025 Certified Foundations Associate

Technical & Professional

- Java, SQL, and Problem Solving — HackerRank
- Python — CODL (University of Moratuwa)
- Postman API Fundamentals — Student Expert, Postman
- Introduction to Cybersecurity — Cisco Networking Academy

ACHIEVEMENTS

1st Runner-Up — Road to Rushcoder 3.0 Hackathon Jan 2025

Team Byte_Builders · University of Ruhuna, Dept. of Computer Science

- Placed 1st runner-up among 50+ competing teams in a 2-hour competitive coding hackathon testing problem-solving and technical skills under time pressure.

Google Cloud Skills Boost Arcade — Program Completion 2025

- Completed 355+ hands-on labs and real-world challenges across Google Cloud technologies.

EDUCATION

BSc in Physical Science — Computer Science, Mathematics & Applied Mathematics 2023 – Present

University of Ruhuna

Diploma in Software Engineering 2022 – 2023

National Institute of Business Management (NIBM)

- Relevant coursework: C, C#, Java, JavaScript, HTML, React.js, MSSQL, IntelliJ, Supabase

G.C.E. Advanced Level — Physical Science Stream 2019 – 2021

Vidyaloka College, Galle
